A 100-word write-up explaining what you animated and how you trigger it:

I animated a couple of things today, I started with animating the Spiked Ball, then setting the animation to only trigger after the player walks through it. I am still not sure if I want a spiked ball in my level but I do like the idea. I also animated the character with the Idle animation that will play at the start of the game. I also added in the Run and Jump animations for the character that will trigger with the specific script that we added in. For the personal twist, I added in an animation for the Saws on the bottom of the level so they are always spinning.
