A short write-up summarizing your process:

Today I ended up creating a lot of different prefabs to use on other levels. I also took a lot of that time in class to create the “Box2Lives” prefab, working with a lot of the materials we had already used in class and creating a box that will change its sprite after the player leaves it then after a second or so, will switch over to the other box that will fall if the player uses that box again. I created prefabs for the Key and Chest items, and I eventually created a prefab for the building that I have created with the doors and the lever to open said doors.
