100-Word Writeup: A concise summary (≈100 words) describing your design choices, key features, and what makes your level unique.

I started working on this lab with an idea that I wanted there to be a really clear objective and a way to get it, but also an “extra curricular”. In order for the player to get full points for this level they need to just cross a pit with a saw, fight the spike mob, then collect the key. The design intention after that is that the door would swing open, I mostly just used a key as a place holder for a lever because I couldn’t find a lever sprite to use. After collecting that key, they will then get into the room, open the chest, then use the jump pads to get on top of the building to complete the level at the checkpoint.
