A 100-word write-up explaining what sound you added and how you triggered them:

I added in a couple of different sounds than was in the default set up, for the background sound that plays at the start of the level I added an Animal Crossing type of sound to just play. After you get hurt, or pick up the apple, it will trigger the PowerDown or PowerUp audios respectively. After the PlayerID picks up the key, it will switch to the audio that we did in class with the sound effect. I added in the Chorus effect to the Group so that it isn't just the regular audio. I also added an effect to the Flag at the top of the building that will trigger the Win Snapshot and play a medieval win sound with trumpets and drums, sounds pretty cool. Anyway, NONE of my objects currently have an audio resource component on them, I have separate objects that will trigger the effect, so like my SpikeBall will trigger the PowerDown Audio to play, rather than having that attached to the SpikeBall. This will allow me to delete/remove components and not have to worry about the audio breaking (Using the Key to unlock the chest)
