A 100-word description of your camera setup:

I added in an object that moves the camera in a “cut-scene” type of view of the level before attaching the camera back onto the player character. I also changed the scripts for the damaging units to restart the level when the player health reaches 0. So when you load into the level, the camera will start and go over to the key, swing over to the chest, then move back to the start position where it will then attach to the invisible falling player character. Then causing the player to turn visible and the camera to follow and snap to the character.
